Dart is a client-optimized programming language that supports various areas like multiplatform application development, formatting, analyzing, and testing code. It is a programming language that forms the basic foundation of Flutter.Â AAÂ Flutter is an open-source UI framework Software development kit that helps develop applications for Android, iOS, Mac, Windows, Google Fuchsia, and the web in a single code base. Visual Studio Code is a code editor developed by Microsoft for Windows, Mac, and Linux with features like code debugging, syntax highlighting, code completion, code refactoring, etc. Follow the below steps to install the dart SDK: Step 1: Open the Dart SDK website. Step 2: Scroll down to the bottom of the website and click the Dark SDK for Windows or Mac or Linux, accordingly. Step 4: Once the download is complete, go to the Dark SDK download folder and unzip the newly downloaded Dart-SDK zip file. Step 5: For unzipping the file, right-click on the file and click Extract Here. Step 6: Now, a new folder named dart-sdk will be created in the Program Files folder. Step 7: Copy this file and paste it in the dart-sdk folder. Step 8: Open the Program Files folder and you will find a folder named bin. Step 9: Now, right-click on the bin folder and choose Properties. Step 10: In the bin window, go to Security, also known as the address of the file, and press OK. Installation of Dart SDK: Step 11: Open This PC folder, right-click inside this folder, and choose Properties. Step 12: In the System window, select Advanced system settings that will be available on the left-hand side. Step 13: Under the Advanced tab, click Environment Variables. Step 14: Under the User variables section, click New. Step 15: Set the Variable name to DART_HOME and the Variable value to the path of the Dart SDK installation directory (e.g., C:\Program Files\flutter\dart-sdk\bin). Step 16: Click OK to close all dialog boxes. Step 17: Open a terminal window and type dart --version to verify the Dart version. Step 18: Create a new Dart project by running the command flutter create myapp. Step 19: Navigate to the project directory and run the command flutter run to build and run the app on an emulator or physical device.
